We back up your **business**; No **data** no **business!**

Who we are

PC Montreal Online Backup software is a comprehensive data protection and recovering system for small to large businesses, whether it is your computer at work or your laptop at home. We offer an easy-to-use reliable backup protection and restoration system that ensures important business and personal data are protected and readily available when needed. Our Client to Server Software enables you direct management of your irreplaceable digital assets.

In today's data driven environment, business enterprises are faced with various challenges when backing up and restoring their data. These include poor security, long recovery times, human error and massive amounts of information to protect. PC Montreal offers unparallel products and services to enhance the protection, productivity and growth of your business with our five principals

See how PCM can enhance your business!

Security

Many online backup providers will make you believe that all backup & restoration services are created equal. Case in Point: Web based backup security is based only on a username and a password. Your files can be accessed from any computer or laptop that can leave your documents vulnerable to exposure and theft.

PC MONTREAL backup & recovery services software is designed for maximum security. Your data is encrypted and compressed on your computer or laptop before being uploaded and secured at our Data Center. When the files are recovered, they can only be accessible and read on your physical computer or laptop. Our administrative team will have access only on the permission of the client.

Safety

The backup, recovery and security of your business documents are based on two key components that are the fundamental strengths of PC Montreal in maintaining our 100% data recovery track record.

Your data is safe from crashes; your data is safe from hackers.

At the scheduled time, (Daily, Weekly, Monthly) the backup will begin and download your files into our client backup library. You will receive an email along with your listed contacts notifying the backup is secure with a backup job summary. If there is an error or warning, you and your contacts will be notified by our technical staff.

Productivity

As the cliché states *"Time is money."*

Your professional documents on your PC and laptop are continuously at risk through hard drive crashes, power outages, static, human error and unforeseen circumstances. Laptops and USB keys are stolen, dropped and lost. IT technicians at an average expense of $85.00 per hour would be required to retrieve your information on your backup or to recover the files on your hard drive. Preventive costs are equivalent to revenue earned. Allow your company to take advantage of our free 30 day trial offer.

Specialized Backup Agents: MS Exchange Mail Level, MS Exchange, SQL, Oracle, MySQL, Lotus Domino/Notes, Macintosh Server Agents

Cost Effective

PC Montreal's distinctive personalized set up support service and after set up support service is what distinguishes us from the web based online storage backups. With our all inclusive backup and recovery packages for desktops & laptops, there are no additional service fees, specific hardware or software to purchase. What you are quoted is what you will be charged for the protection and restoration of your data.
